1. Question

DB	Uncertainty
1. ———————	X X X
2. ———————	X X X
3. ———————	X X X

I typed in the question in the search box I received, and the system returns a list of database I should check, together with it uncertainty value.
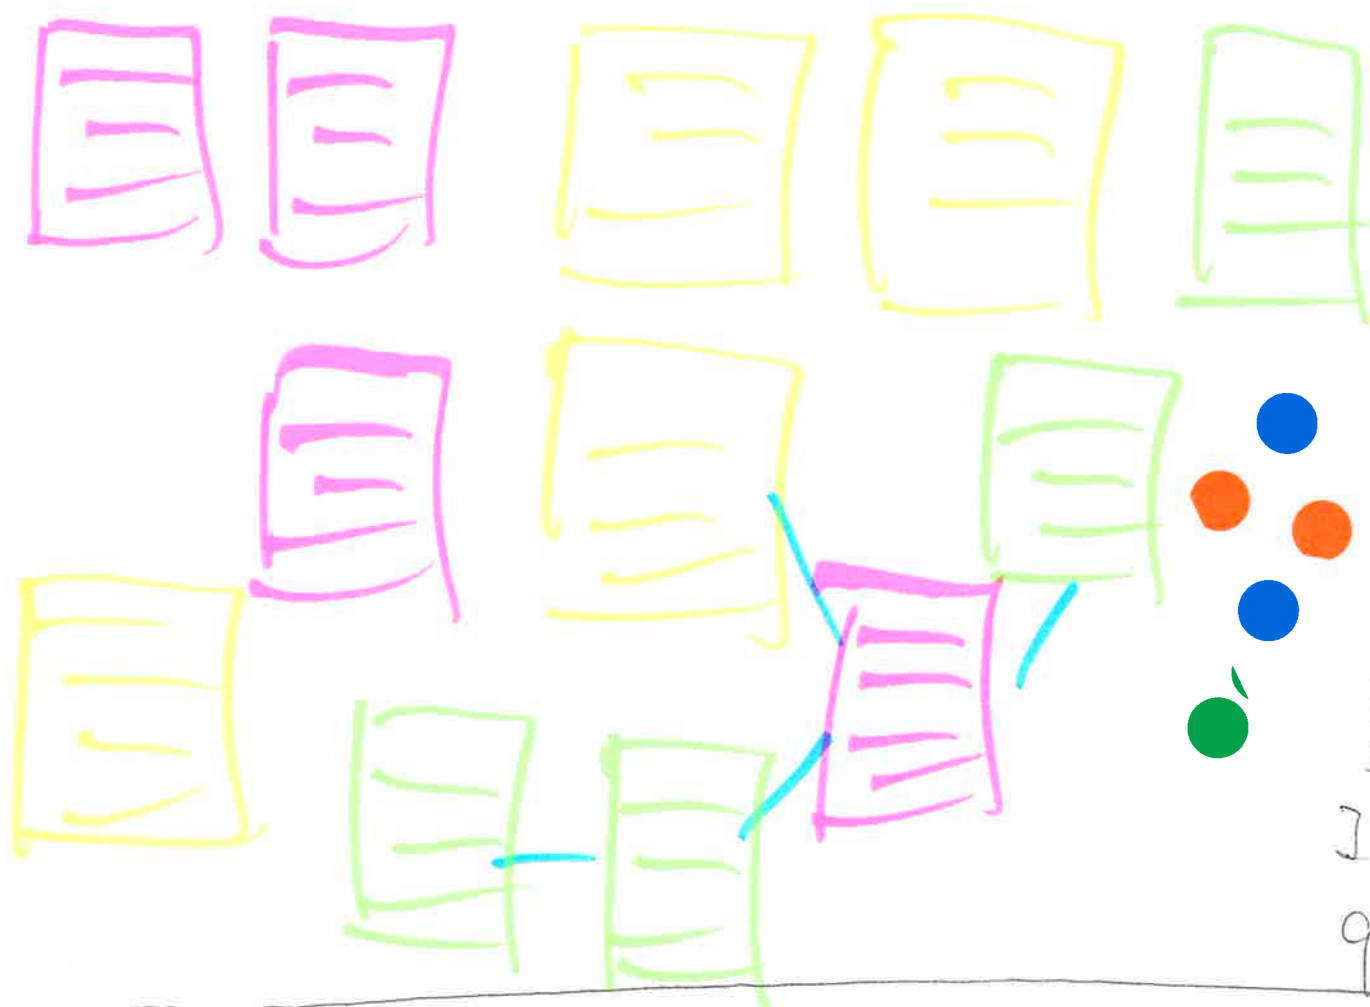

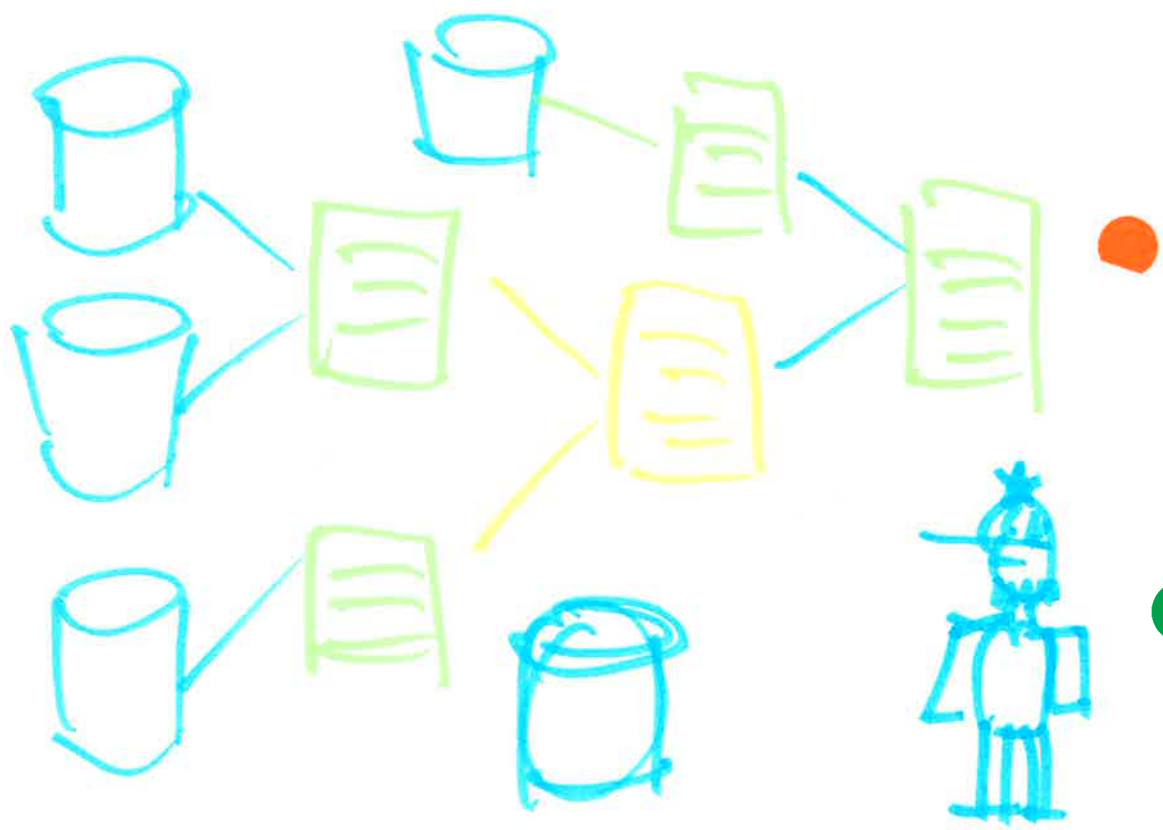

All the things I found are presented spatially, either in time order (timeline) or group by how similar they are. The uncertainty level of each piece of information is visually very clear. Things can be connected as well. Overall, I can make sense / a judgement quickly and easily.

When I show the result to the general, I can show all the process as well, so he will trust me / my analysis.
